## K. J. Somaiya Institute of Engineering and Information Technology Sion, Mumbai - 400022 <br> NAAC Accredited Institute with 'A' Grade

NBA Accredited 3 Programs (Computer Engineering, Electronics \& Telecommunication Engineering and Electronics Engineering) Permanently Affiliated to University of Mumbai

EXAMINATION TIME TABLE (JUNE 2021)
PROGRAMME - T.E. (Electronics \& Telecommunication)(REV. -2016) (Choice Based)
SEMESTER - V

| Days and Dates | Time | Course Code | Paper |
| :--- | :---: | :---: | :--- |
| Wednesday, June 16, 2021 | 11.30 a.m to 1.30 p.m | ECC501 | Micropocessor \& Peripherals <br> Interfacing |
| Friday, June 18, 2021 | 11.30 a.m to 1.30 p.m | ECC502 | Digital Communication |
| Monday, June 21, 2021 | 11.30 a.m to 1.30 p.m | ECC503 | Electromagnetic Engineering |
| Wednesday, June 23, 2021 | 11.30 a.m to 1.30 p.m | ECC504 | Discrete Time Signal Processing |
| Friday, June 25, 2021 | 11.30 a.m to 1.30 p.m | ECCDLO 5011 | Elective I : Microelectronics |
| Friday, June 25, 2021 | 11.30 a.m to 1.30 p.m | ECCDLO 5012 | Elective I : TV \& Video Engineering |
| Friday, June 25, 2021 | 11.30 a.m to 1.30 p.m | ECCDLO 5013 | Elective I : Finite Automata Theory |
| Friday, June 25, 2021 | 11.30 a.m to 1.30 p.m | ECCDLO 5014 |  <br> Encryption |

Important Note: • Change if any, in the time table shall be communicated on the college web site.

20th May, 2021

## University of Mumbai

Examination June 2021
Examinations Commencing from 15 ${ }^{\text {th }}$ June 2021 to 26 ${ }^{\text {th }}$ June 2021
Program: BE Electronics and Telecommunication Engineering Curriculum Scheme: Rev-2016
Examination: TE Semester V
Course Code: ECC501 and Course Name: Microprocessor and Peripherals Interfacing

| Q1. | Choose the correct option for following questions. All the Questions are compulsory and carry equal marks |
| :---: | :---: |
| 1. | A computer program that translates high level programming language code to machine level code is $\qquad$ |
| Option A: | Assembler |
| Option B: | Compiler |
| Option C: | Interpreter |
| Option D: | Converter |
|  |  |
| 2. | 8086 microprocessors can access -------- IO ports. |
| Option A: | 16K |
| Option B: | 8K |
| Option C: | 32K |
| Option D: | 64K |
|  |  |
| 3. | 8086 microprocessor has -------- byte prefetch queue in bus interface unit. |
| Option A: | 6 |
| Option B: | 4 |
| Option C: | 3 |
| Option D: | 2 |
|  |  |
| 4. | Memory Segmentation permits the programmer to access 1MB memory using only --------- bit address. |
| Option A: | 8 |
| Option B: | 16 |
| Option C: | 32 |
| Option D: | 20 |
|  |  |
| 5. | Which flag is set/reset for auto incrementing/decrementing modes of SI and DI during string operations in an 8086 microprocessor? |
| Option A: | DF |
| Option B: | OF |
| Option C: | IF |
| Option D: | TF |
|  |  |
| 6. | The result of MOV AL, 58 --------. |
| Option A: | store 01011000 in AL |
| Option B: | store 58 H in AL |

| Option C: | store data from memory 58 to AL |
| :---: | :---: |
| Option D: | store 00111010 in AL |
| 7. | The instruction that loads an effective address formed by destination operand into the specified source register is $\qquad$ |
| Option A: | LEA |
| Option B: | LDS |
| Option C: | LES |
| Option D: | LAHF |
|  |  |
| 8. | Which of the following instructions gives 2's complement of the number? |
| Option A: | DAA |
| Option B: | NEG |
| Option C: | DAS |
| Option D: | CMP |
|  |  |
| 9. | How many channels are present in one DMA Controller IC 8257? |
| Option A: | 2 |
| Option B: | 4 |
| Option C: | 6 |
| Option D: | 8 |
|  |  |
| 10. | In control word format of 8254, if RL1=1, RL0 $0=1$ then the operation performed is |
| Option A: | read/load least significant byte only |
| Option B: | read/load most significant byte only |
| Option C: | read/load LSB first and then MSB |
| Option D: | read/load MSB first and then LSB |
|  |  |
| 11. | How many ICW (Initialization Command Word) are present in 8259? |
| Option A: | 2 |
| Option B: | 4 |
| Option C: | 6 |
| Option D: | 8 |
|  |  |
| 12. | Which of the following is a bidirectional I/O mode in 8255? |
| Option A: | Mode 0 |
| Option B: | Mode 1 |
| Option C: | Mode 2 |
| Option D: | BSR |
|  |  |
| 13. | Exit Condition for LOOP instruction is --------. |
| Option A: | $\mathrm{AX}=0000 \mathrm{H}$ |
| Option B: | $\mathrm{BX}=0000 \mathrm{H}$ |
| Option C: | $\mathrm{CX}=0000 \mathrm{H}$ |
| Option D: | DX $=00000 \mathrm{H}$ |
|  |  |
| 14. | Instruction Queue is used for --------. |
| Option A: | Pipelining |
| Option B: | Memory Segmentation |

| Option C: | Memory Banking |
| :---: | :--- |
| Option D: | Memory Interfacing |
|  |  |
| 15. | The function of S5 pin is to --------. |
| Option A: | Give status of Interrupt Enable Flag |
| Option B: | Give status of Trap Flag |
| Option C: | Give status of Direction Flag |
| Option D: | Give status of Sign Flag |
|  |  |
| 16. | The time taken by the ADC from the active edge of SOC pulse till the active edge <br> of EOC signal is referred as -------. |
| Option A: | Conversion delay |
| Option B: | Settling time |
| Option C: | Take off time |
| Option D: | output time |
|  |  |
| 17. | In ADC, the ALE is used to |
| Option A: | start conversion |
| Option B: | stop conversion |
| Option C: | provide clock |
| Option D: | Latch Channel number |
|  |  |
| 18. | Which of the following signals is used to select the ODD memory bank in 8086? |
| Option A: | ALE |
| Option B: | Active low BHE |
| Option C: | A0 |
| Option D: | MEMR |
|  |  |
| 19. | How many address lines a memory chip of 1K capacity will have? |
| Option A: | 8 |
| Option B: | 10 |
| Option C: | 11 |
| Option D: | 12 |
|  |  |
| 20. | The BUSY signal of 8087 is connected with -------- pin of 8086. |
| Option A: | TEST |
| Option B: | HOLD |
| Option C: | INTR |
| Option D: | QS0 |

| Q2 | Solve any Two Questions out of Three $\quad$ 10 marks each |
| :---: | :--- |
| A | Write a Program to find strength of Positive and Negative numbers among <br> the series of 10 signed numbers. |
| B | Explain the Interrupt structure of 8086 Microprocessor. |
| C | Explain Various operating modes of 8255 PPI. |

| Q3. |  |
| :---: | :--- |
| A | Solve any Two |
| i. | Explain the instruction pipelining features of 8086. Give its advantages and <br> its disadvantages. |
| ii. | Explain the need of assembly language and compare with high level <br> languages. |
| iii. | If 16k RAM (2 chips of 8k each) are interfaced with 8086.Assuming that <br> physical address of RAM is 00000H,what will be the starting and ending <br> address of each chip? |
| B | Solve any One |
| i. | Explain Maximum Modes of 8086 Microprocessor. Draw timing diagram <br> for Read operation in maximum Mode. |
| ii. | Draw and explain the interfacing of DAC 0809 with 8086 microprocessor <br> using 8255. Also write an assembly language program to generate square <br> wave. |

| Q20. |  |
|  |  |

# University of Mumbai 

Examination June 2021
Examinations Commencing from 15 ${ }^{\text {th }}$ June 2021 to $\mathbf{2 6}^{\text {th }}$ June 2021
Program: Electronics and Telecommunication Engineering
Curriculum Scheme: Rev2016
Examination: Third Year Semester V
Course Code: ECC502 and Course Name: Digital Communication
Time: 1 hour

| Q1. | Choose the correct option for following questions. All the Questions are compulsory and carry equal marks |
| :---: | :---: |
| 1. | Let X be a real-valued random variable with $E[X]$ and $E\left[X^{2}\right]$ denoting the mean values of X and $\mathrm{X}^{2}$, respectively. The relation which always holds |
| Option A: | $(E[X])^{2}>E\left[X^{2}\right]$ |
| Option B: | $E\left[X^{2}\right] \geq(E[X])^{2}$ |
| Option C: | $E\left[X^{2}\right]=(E[X])^{2}$ |
| Option D: | $E[X]^{2}>(E[X])^{2}$ |
| 2. | What does the central limit theorem state? |
| Option A: | if the sample size increases sampling distribution must approach normal distribution |
| Option B: | if the sample size decreases then the sample distribution must approach normal distribution |
| Option C: | if the sample size increases then the sampling distribution much approach an exponential distribution |
| Option D: | if the sample size decreases then the sampling distribution much approach an exponential distribution |
|  |  |
| 3. | The value of the probability density function of random variable is |
| Option A: | Positive function |
| Option B: | Negative function |
| Option C: | Zero |
| Option D: | One |
|  |  |
| 4. | The source encoder has $\mathrm{H}=1.75$ bits/Message and $\mathrm{N}=2$ bits/Message. Then coding efficiency is, |
| Option A: | 87.5 \% |
| Option B: | 90 \% |
| Option C: | 50 \% |
| Option D: | $20 \%$ |
|  |  |
| 5. | When Information increases then |
| Option A: | Probability also increases |
| Option B: | Probability has no relation with information |
| Option C: | Probability remains constant |
| Option D: | Probability decreases |
|  |  |
| 6. | Huffman and Shannon Fano coding are types of |
| Option A: | Channel coding |

## University of Mumbai

Examination June 2021
Examinations Commencing from $15^{\text {th }}$ June 2021 to $26^{\text {th }}$ June 2021

| Option B: | Source coding |
| :---: | :---: |
| Option C: | Error control codes |
| Option D: | Error correction code |
| 7. | The generator polynomial for cyclic codes with dimension (6,3) is, |
| Option A: | $\mathrm{x}+1$ |
| Option B: | $x^{2}+2 x+1$ |
| Option C: | $x^{3}+x+1$ |
| Option D: | $2 \mathrm{x}+1$ |
|  |  |
| 8. | The no of errors detected s and no. of errors corrected t for dmin=3 |
| Option A: | $\mathrm{s}=2, \mathrm{t}=1$ |
| Option B: | $\mathrm{s}=2, \mathrm{t}=2$ |
| Option C: | $\mathrm{s}=1, \mathrm{t}=1$ |
| Option D: | $\mathrm{s}=3, \mathrm{t}=1$ |
| 9. | If the sum of any two code vectors produces another code vector the code is called as |
| Option A: | Linear |
| Option B: | Non linear |
| Option C: | Summative |
| Option D: | Cyclic |
|  |  |
| 10. | Which of the following techniques is used for generation of convolutional codes? |
| Option A: | Tree Diagram |
| Option B: | Huffman coding |
| Option C: | Generator matrix |
| Option D: | Shannon Fano coding |
|  |  |
| 11. | For convolutional encoder, the no. of message bits K considered for encoding at a time are |
| Option A: | $\mathrm{K}=2$ |
| Option B: | $\mathrm{K}=4$ |
| Option C: | $\mathrm{K}=1$ |
| Option D: | $\mathrm{K}=5$ |
|  |  |
| 12. | The binary modulation format which has better error performance is |
| Option A: | ASK |
| Option B: | FSK |
| Option C: | PSK |
| Option D: | FSK and ASK |
|  |  |
| 13. | The bandwidth of BFSK is than BPSK. |
| Option A: | Lower |
| Option B: | Same |
| Option C: | Higher |

## University of Mumbai

Examination June 2021
Examinations Commencing from 15 ${ }^{\text {th }}$ June 2021 to 26 $^{\text {th }}$ June 2021

| Option D: | Not predictable |
| :---: | :---: |
| 14. | The M- Ary modulation is preferred over binary modulation due to |
| Option A: | Improved noise performance |
| Option B: | Improved bandwidth efficiency |
| Option C: | Improved sensitivity |
| Option D: | Decreased BER |
| 15. | Constellation diagram is used to find, |
| Option A: | Bandwidth |
| Option B: | Spectral efficiency |
| Option C: | Noise performance |
| Option D: | Power |
| 16. | The process of converting digital symbols into suitable waveform is known as, |
| Option A: | Source coding |
| Option B: | Channel coding |
| Option C: | Line coding |
| Option D: | Correlative coding |
| 17. | Raised cosine filter with roll off factor $\rho=1$ gives the transmission band width $B_{T}$ equal to |
| Option A: | 2 W |
| Option B: | 0.5 W |
| Option C: | 1W |
| Option D: | 1.5 W |
| 18. | Eye diagram is used to find, |
| Option A: | Data rate of source |
| Option B: | Entropy |
| Option C: | Mutual Information |
| Option D: | ISI introduced by channel |
| 19. | Matched filters may be optimally used only for |
| Option A: | Gaussian noise |
| Option B: | Transit time noise |
| Option C: | Flicker |
| Option D: | Shot Noise |
| 20. | The optimum filter which gives maximum SNR in presence of white noise is, |
| Option A: | Nyquist filter |
| Option B: | Duobinary filter |
| Option C: | Integrator |
| Option D: | Matched filter |

## University of Mumbai

Examination June 2021
Examinations Commencing from 15 ${ }^{\text {th }}$ June 2021 to $\mathbf{2 6}^{\text {th }}$ June 2021

| Q2 | Solve any Two Questions out of Three 10 marks each |
| :---: | :---: |
| A | Explain the following terms and give their significance <br> (i) Mean <br> (ii) Central moment <br> (iii) Variance <br> (iv) Standard deviation |
| B | Consider source alphabet of DMS having source symbols with their respective probabilities $0.40,0.20,0.12,0.08,0.08$ and 0.04 <br> i) Find Entropy of source <br> ii) Find average codeword length <br> iii) Determine coding efficiency <br> iv) Comment on the result |
| C | Over a long transmission line draw the following data format for the binary sequence 10011101011. <br> i) Unipolar NRZ <br> ii) Polar RZ <br> iii) Manchester <br> iv) AMI <br> Select the best and justify the answer. |

| Q3 | Solve any Two Questions out of Three $\quad$ 10 marks each |
| :---: | :--- |
| A | Consider a convolution encoder with the constraint length K=3 and <br> $\mathrm{g}^{1}=\{1,0,1\}$ and $\mathrm{g}^{2}=\{0,1,1\}$. Find the code vector for the message stream <br> 11010 using time domain approach. Verify the code vector using transform <br> approach. |
| B | Explain 16-ary PSK with respect to the following terms <br> i) $\quad$ Modulator and demodulator <br> ii) $\quad$ Power spectral density and bandwidth |
| C | Derive an expression for probability of matched filter. |

Examination June 2021
Examinations Commencing from 15 ${ }^{\text {th }}$ June 2021 to $26^{\text {th }}$ June 2021
Program: Electronics and Telecommunication Engineering
Curriculum Scheme: Rev2016
Examination: Third Year Semester V
Course Code: ECC503 and Course Name: Electromagnetic Engineering
Time: 2 hour

| Q1. | Choose the correct option for following questions. All the Questions are <br> compulsory and carry equal marks |
| :--- | :--- |
| 1. | If a negative charge is absent, then where do the flux lines terminate? |
| Option A: | At zero |
| Option B: | At unity |
| Option C: | At infinity |
| Option D: | At radial field |
|  |  |
| 2. | Divergence theorem is applicable for |
| Option A: | Static fields only |
| Option B: | Time varying fields only |
| Option C: | Both static and time varying fields |
| Option D: | Not applicable to any field |
|  |  |
| 3. | The capacitance of a material refers to |
| Option A: | Ability of the material to store magnetic field |
| Option B: | Ability of the material to store electromagnetic field |
| Option C: | Ability of the material to store electric field |
| Option D: | Potential between two charged plates |
|  |  |
| 4. | Find the characteristic impedance expression in terms of the inductance and <br> capacitance parameters. |
| Option A: | Zo = sqrt(LC) |
| Option B: | Zo = LC |
| Option C: | Zo = sqrt(L/C) |
| Option D: | Zo = L/C |
|  |  |
| 5. | Copper behaves as a |
| Option A: | Conductor always |
| Option B: | Conductor or dielectric depending on the applied electric field strength |
| Option C: | Conductor or dielectric depending on the frequency |
| Option D: | Conductor or dielectric depending on the electric current density |
|  |  |
| 6. | Curl (E) = -วB/Dt is called |
| Option A: | Maxwell's equation for static fields |
| Option B: | Maxwell's equation for time varying fields |

| Option C: | Gauss Law of electrostatics |
| :--- | :--- |
| Option D: | Biot Savart's law |
|  |  |
| 7. | A boundary of separation between two magnetic materials is identified by which <br> factor? |
| Option A: | Change in the permeability |
| Option B: | Change in permittivity |
| Option C: | Change in magnetization |
| Option D: | Conduction |
|  |  |
| 8. | Given that the reflection coefficient is 0.6. Find the VSWR. |
| Option A: | 2 |
| Option B: | 4 |
| Option C: | 6 |
| Option D: | 8 |
|  |  |
| 9. | The ratio of conduction to displacement current density is referred to as |
| Option A: | Attenuation constant |
| Option B: | Propagation constant |
| Option C: | Loss tangent |
| Option D: | Dielectric constant |
|  |  |
| 10. | The SI unit of magnetic field intensity is |
| Option A: | A/m |
| Option B: | V/m |
| Option C: | C/m |
| Option D: | F/m |
|  |  |
| 11. | Which component of the electric field intensity is always continuous at the <br> boundary? |
| Option A: | 1 |
| Option B: | 0 |
| Option C: | Infinity |
| Option A: | Tangential |
| Option B: | Normal |
| Option C: | Horizontal |
| Option D: | Vertical |
|  |  |
| 12. | Which of the following cannot be computed using the Biot-Savart's law? |
| Option A: | Magnetic field intensity |
| Option B: | Magnetic flux density |
| Option C: | Electric field intensity |
| Option D: | Permeability |
|  |  |
| 13. |  |
|  |  |

| Option D: | +j |
| :---: | :---: |
| 14. | $\qquad$ provides a method whereby the potential function can be obtained subject to the conditions on the boundary. |
| Option A: | Poisson's Equation |
| Option B: | Faraday's Law |
| Option C: | Laplace's Equation |
| Option D: | Poynting Theorem |
| 15. | If divergence of a field is positive, then field acts as a |
| Option A: | Reducing field |
| Option B: | Increasing field |
| Option C: | Converging field |
| Option D: | Diverging field |
| 16. | Total magnetic flux crossing a closed surface is |
| Option A: | Total flux enclosed by the surface |
| Option B: | Total current enclosed by the surface |
| Option C: | Total charge enclosed by the surface |
| Option D: | Zero |
| 17. | The open wire transmission line consists of |
| Option A: | Conductor |
| Option B: | Dielectric |
| Option C: | Both conductor and dielectric |
| Option D: | Either conductor or dielectric |
| 18. | The magnitude of the Ex and Ey components are the same in which type of polarization? |
| Option A: | Linear |
| Option B: | Circular |
| Option C: | Elliptical |
| Option D: | Perpendicular |
|  |  |
| 19. | A bar magnet is divided in two pieces. Which of the following statements is true? |
| Option A: | The bar magnet is demagnetized. |
| Option B: | The magnetic field of each separated piece becomes stronger. |
| Option C: | The magnetic poles are separated. |
| Option D: | Two new bar magnets are created. |
|  |  |
| 20. | One Tesla is equal to |
| Option A: | $1 \mathrm{~Wb} / \mathrm{m}^{\wedge} 2$ |
| Option B: | $1 \mathrm{C} / \mathrm{m}^{\wedge} 2$ |
| Option C: | $1 \mathrm{~Wb} / \mathrm{C}$ |
| Option D: | $1 \mathrm{~N} / \mathrm{C}$ |
|  |  |

| Q2 | Solve any Two Questions out of Three 10 marks each |
| :---: | :--- |
| A | If $\underline{E}=2 r^{2} \cos \emptyset \cos \varphi a_{\varphi} \ldots \frac{V}{m}$ found in chemical $\left(\varepsilon=2 \varepsilon_{0}\right)$ filled <br> cylindrical chamber having radius $\mathrm{r}=0.2 \mathrm{~m}$ and height $\mathrm{z}=1 \mathrm{~m}$, find total <br> charge lying on the chemical. |
| B | Two isolated cone having same radius suspended on two angles <br> $\theta=30^{\circ} \& \theta=60^{\circ}$ excited by voltage |
| $V\left(\theta=30^{\circ}\right)=100 V \& V\left(\theta=60^{\circ}\right)=200 V$, then find out Electric field <br> generated between two cones and prove it in between two cone Electric <br> fields passing through the charge free region. |  |
| C | Derive magnetic field due infinite straight current carrying conductor. |

| Q3 | Solve any Two Questions out of Three $\quad$ 10 marks each |
| :---: | :--- |
| A | Oscillating EM wave used to check properties of non-magnetic dielectric <br> paraffin wax $\left(\sigma=0, \mu=\mu_{0}\right)$ at $f=100 \mathrm{MHz}$. By experimentation we <br> get $\left(\varepsilon=4 \varepsilon_{0}\right)$ for paraffin wax. Find out following properties of EM wave <br> generated in given paraffin wax material: <br> i) Attenuation constant <br> ii) Phase constant <br> iii) Phase velocity <br> iv) Intrinsic impedance <br> v) Magnetic field induced in material if $\|\underline{E}\|=10 \frac{K V}{m}$ |
| B | Strip of transmission line is designed on Fibre glass substrate having <br> relative permittivity of $\varepsilon_{r}=4$ operating at $f=2 G H z$ and terminated <br> with load impedance of $Z_{L}=120+150 j \Omega$ with $Z_{0}=100 \Omega$; find out <br> input impedance of transmission line if strip length is $l=0.2 \lambda$ at a given <br> frequency. Solve by Analytical methods. |
| C | Explain electrostatic breakdown in lightning and its conditions. |

## University of Mumbai

Examination June 2021
Examinations Commencing from $15^{\text {th }}$ June 2021 to $26^{\text {th }}$ June2021
Program: Electronics and Telecommunication Engineering
Curriculum Scheme: Rev2016
Examination: TE Semester VI
Course Code: ECC-504 and Course Name: Discrete Time Signal Processing
Time: 2 hour

| Q1. | Choose the correct option for following questions. All the Questions are <br> compulsory and carry equal marks |
| :---: | :--- |
|  |  |
| 1. | If the normalized transition width of a FIR filter using Hamming window is 0.1, <br> the order N of the FIR filter is given as |
| Option A: | 33 |
| Option B: | 31 |
| Option C: | 9 |
| Option D: | 10 |
|  |  |
| 2. | If an N-point sequence, If $\mathrm{N}=16$, the total number of complex additions and <br> multiplications using Radix-2 FFT are, |
| Option A: | 64,80 |
| Option B: | 80,64 |
| Option C: | 64,32 |
| Option D: | 18,24 |
| 3. | Range of Round off error for sign magnitude binary number representation with B <br> number of bits is given as ------ |
| Option A: | $-\left(\frac{2^{-B}}{2}\right) \leq \epsilon_{R} \leq\left(\frac{2^{-B}}{2}\right)$ |
| Option B: | $-\left(2^{-B}\right) \leq \epsilon_{R} \leq 0$ |
| Option C: | $-\left(2^{-B}\right) \leq \epsilon_{R} \leq\left(2^{-B}\right)$ |
| Option D: | $-\left(2^{+B}\right) \leq \epsilon_{R} \leq 0$ |
|  |  |
| Option A: | The difference between butterworth and chebyshev filter pole location is <br> ellipse |
| Option B: | Poles of butterworth filter lie on ellipse while poles of chebyshev filter lie on <br> circle |
| Option C: | Poles of butterworth filter lie on unit circle while poles of chebyshev filter lie on <br> circle |
| Option D: | Poles of butterworth filter lie on ellipse and poles of chebyshev filter also lie on <br> ellipse |
| Option A: | $\mathrm{X}(1)=2$ |
| Compute the DFT of the Sequence, x(n) $)=\{0,1,2,1\}$ at K=1 |  |
| while poles of chebyshev filter lie on |  |
| P. |  |

| Option B: | $\mathrm{X}(1)=-2$ |
| :---: | :---: |
| Option C: | $\mathrm{X}(1)=1$ |
| Option D: | $X(1)=-1$ |
| 6. | An antisymmetric FIR filter with length N as even does not pass the frequency at $\omega=\frac{\pi}{3} \mathrm{rad} / \mathrm{sec}$. Give the location of the zeros of this filter |
| Option A: | $1 \angle \frac{\pi}{3}, 1 \angle-\frac{\pi}{3}$ and 1 |
| Option B: | $1 \angle \frac{\pi}{3}, 1 \angle-\frac{\pi}{3}$ and -1 |
| Option C: | $1 \angle \frac{\pi}{3}, 1 \angle-\frac{\pi}{3}, 1$ and -1 |
| Option D: | $1 \angle \frac{\pi}{3}, 1 \angle-\frac{\pi}{3}$ |
|  |  |
| 7. | In the DTMF detection the ___ algorithm is used |
| Option A: | DIT-FFT |
| Option B: | DIF-FFT |
| Option C: | Geortzel's |
| Option D: | Chirpz |
| 8. | The process of reducing the number of bits of a binary number is called |
| Option A: | Rounding |
| Option B: | Truncation |
| Option C: | Finite word |
| Option D: | Subtraction |
| 9. | In DSP processors the convolution and correlation operations are performed in faster manner due to hardware |
| Option A: | Multiple and accumulate unit (MAC) |
| Option B: | VLIW |
| Option C: | Multiple register structure |
| Option D: | Multiple processors |
| 10. | Which filter has equi-ripple characteristics in the passband and varies monotonically in the stopband |
| Option A: | Type-I Chebyshev |
| Option B: | Type-II Chebyshev |
| Option C: | Butterworth |
| Option D: | Elliptical |
| 11. | Design a Chebyshev filter with a maximum pass band attenuation of 2.5 dB at 20 $\mathrm{rad} / \mathrm{sec}$ and a minimum stop band attenuation of 30 dB at $50 \mathrm{rad} / \mathrm{sec}$ |
| Option A: | 2 |
| Option B: | 3 |
| Option C: | 1 |
| Option D: | 4 |
|  |  |
| 12. | The effect of coefficient quantization is less in realization |
| Option A: | Direct Form I |
| Option B: | Direct Form II |

| Option C: | Cascade |
| :---: | :---: |
| Option D: | Parallel |
| 13. | The convolution of two signals in time domain is equivalent to $\qquad$ of their spectra in frequency domain. |
| Option A: | Addition |
| Option B: | Multiplication |
| Option C: | Division |
| Option D: | Convolution |
| 14. | The Complex valued phase factor/ Twiddle factor, $W_{N}$ can be expressed as, |
| Option A: | $W_{N}=e^{-j 2 \pi N}$ |
| Option B: | $W_{N}=e^{\frac{-j 2 \pi}{N}}$ |
| Option C: | $W_{N}=e^{-j 2 \pi}$ |
| Option D: | $W_{N}=e^{-j 2 \pi k N}$ |
| 15. | If a signal sequence $\mathrm{x}(\mathrm{n})$ with frequency components between f 1 and f 2 is passed through a filter with a linear frequency response then its output is a |
| Option A: | Expanded version of input $\mathrm{x}(\mathrm{n})$ |
| Option B: | Compressed version of input $x$ ( n ) |
| Option C: | Phase shifted version of input $\mathrm{x}(\mathrm{n})$ |
| Option D: | Delayed version of input $\mathrm{x}(\mathrm{n})$ |
| 16. | Determine the order of the butterworth filter for the specifications <br> Pass band gain $=1 \mathrm{~dB}$ <br> Stop band gain $=30 \mathrm{~dB}$ $\begin{aligned} & \Omega p=200 \mathrm{rad} / \mathrm{s} \text { and } \mathrm{W} \\ & \Omega s=600 \mathrm{rad} / \mathrm{s} . \end{aligned}$ |
| Option A: | 1 |
| Option B: | 2 |
| Option C: | 3 |
| Option D: | 4 |
| 17. | Consider a first order IIR filter $y(n)=x(n)+0.5 y(n-1)$. Find the dead band, if the length of the register is 4 bits |
| Option A: | 0.125 |
| Option B: | 32 |
| Option C: | 0.417 |
| Option D: | 0.25 |
| 18. | In TMS320C67XX DSP processor how many functional units exists |
| Option A: | 8 |
| Option B: | 6 |
| Option C: | 2 |
| Option D: | 4 |

| 19. | The Order N of Type I Linear phase FIR filters is ___ and it has <br> impulse response |
| :---: | :--- |
| Option A: | Odd, Symmetric |
| Option B: | Odd, Asymmetric |
| Option C: | Even, Symmetric |
| Option D: | Even, Asymmetric |
|  |  |
| 20. | If a continuous time system has poles only in the left half of the S plane then the <br> corresponding digital filter must have poles |
| Option A: | Only outside the unit circle |
| Option B: | Only inside the unit circle |
| Option C: | Anywhere on the z plane |
| Option D: | $2 \leq \backslash z \mid \leq 3$ |

| Q2 |  |
| :---: | :---: |
| A | Solve any Two 5 marks each |
| i. | Draw the pole zero diagram of an antisymmetric FIR filter with number of coefficients (length) odd and passes the frequency $=\pi / 2$. Also find its transfer function and identify the type of the linear phase filter |
| ii. | Obtain the expression for the variance of the output noise of a LTI digital system $\mathrm{H}(\mathrm{z})$ which is fed with a quantized input signal |
| iii. | Derive the Parsevals Energy theorem of DFT and also find the Energy of signal $\mathrm{x}(\mathrm{n})=\{1,2,3,4\}$ |
| B | Solve any One 10 marks each |
| 1. | Design a digital Butterworth filter that satisfies following constraints using impulse invariant method. Assume $\mathrm{Ts}=1 \mathrm{~s}$. $\begin{array}{ll} 0.8 \leq \mid H\left(e^{j w}\right) & \mid \leq 1 \\ \left\|H\left(e^{j w}\right)\right\| \leq 0.2 & 0 \leq w \leq 0.2 \pi \\ 0.6 \pi \leq w \leq \pi \end{array}$ |
| ii. | Explain the architecture of TMS320C67XX DSP processor |

| Q3. |  |
| :---: | :---: |
| A | Solve any Two 5 marks each |
| 1. | Derive an expression for Frequency response of Type 1 Linear phase FIR filter having a length $\mathrm{N}=5$. |
| ii. | Explain the application of DSP in Radar processing |
| iii. | What is meant by limit cycles in recursive system? What is dead band of a filter? |
| B | Solve any One 10 marks each |
| 1. | Derive the flow graph for $\mathrm{N}=2.3$ composite FFT |
| ii. | Design type I Chebyshev filter for given specifications as $\alpha_{\mathrm{n}}=2 \mathrm{~dB}, \alpha_{\mathrm{s}}=12 \mathrm{~dB}, \mathrm{Fp}=1 \mathrm{kHz} \& \mathrm{Fs}=2 \mathrm{KHz}$. Use BLT method. Assume T=1s. |

## University of Mumbai

Examination June 2021
Examinations Commencing from $15^{\text {th }}$ June 2021 to $\mathbf{2 6}^{\text {th }}$ June2021
Program: Electronics and Telecommunication Engineering
Curriculum Scheme: Rev 2016
Examination: TE Semester VI
Course Code: ECC-504 and Course Name: Discrete Time Signal Processing
Time: 2 hour
Max. Marks: 80

| Question <br> Number | Correct Option <br> (Enter either ' $\mathbf{A}^{\prime}$ or ' $\mathbf{B}$ <br> or ' $\mathbf{C}^{\prime}$ or ' $\mathbf{D} '$ |
| :---: | :---: |
| Q1. | A. |
| Q2. | C. |
| Q3. | A. |

| Q8. | B. |
| Q9. | A. |
| Q10. | A. |
| Q11. | B. |
| Q12. | C. |
| Q13. | B. |
| Q14. | B. |
| Q15. | D. |
| Q16. | D. |
| Q17. | A. |
| Q18. | A. |
| Q19. | A. |
| Q20. | B. |
|  |  |

## University of Mumbai

Examination June 2021
Examinations Commencing from $15^{\text {th }}$ June 2021 to $\mathbf{2 6}^{\text {th }}$ June 2021
Program: EXTC
Curriculum Scheme: Rev2016
Examination: TE SemV
Course Code: ECCDLO-5011 and Course Name: Microelectronics
Time: 2 hour

| Q1. | Choose the correct option for following questions. All the Questions are compulsory and carry equal marks |
| :---: | :---: |
|  |  |
| 1. | Due to body bias effect |
| Option A: | Threshold voltage increases |
| Option B: | Threshold voltage decreases |
| Option C: | No change in threshold voltage |
| Option D: | Increase drain current |
|  |  |
| 2. | Oxidation process is carried out using |
| Option A: | Oxygen |
| Option B: | Low purity oxygen |
| Option C: | Sulphur |
| Option D: | Nitrogen |
|  |  |
| 3. | The Gate to source Capacitance, $\mathrm{C}_{\mathrm{gs}}$ of a MOSFET in saturation region is given as ( $\mathrm{L}=$ actual channel length, $\mathrm{L}_{D}=$ gate source overlap length) |
| Option A: | $C_{o x} W L_{D}$ |
| Option B: | $C_{o x} W L$ |
| Option C: | $\frac{1}{2} C_{o x} W L_{D}+\frac{1}{2} C_{o x} W L$ |
| Option D: | $\frac{2}{3} C_{o x} W L+C_{o x} W L_{D}$ |
|  |  |
| 4. | The o/p resistance offered by MOSFET is given as |
| Option A: | $1 / \mathrm{I}_{\mathrm{D}}$ |
| Option B: | $1 / \lambda I_{D}$ |
| Option C: | $1 / \mathrm{V}_{\mathrm{DS}}$ |
| Option D: | $1 / \lambda \mathrm{V}_{\mathrm{Ds}}$ |
|  |  |
| 5. | Identify the following circuit |

|  |  |
| :---: | :---: |
| Option A: | Basic current mirror |
| Option B: | Cascode current mirror |
| Option C: | Modified Wilson current mirror |
| Option D: | Bias independent current source |
|  |  |
| 6. | Which of the following in property of Bias independent current source |
| Option A: | Reference current is function of applied supply voltage |
| Option B: | Load current is function of supply voltage |
| Option C: | Load current are essentially independent of supply voltage |
| Option D: | Reference current is function of temperature |
| 7. | Calculate the Current $\mathrm{I}_{5}$. $\left(I_{R E F}=10 \mu A,\left(\frac{W}{L}\right)_{3}=5\left(\frac{W}{L}\right)_{1},\left(\frac{W}{L}\right)_{5}=2\left(\frac{W}{L}\right)_{4}\right)$ |
| Option A: | $100 \mu \mathrm{~A}$ |
| Option B: | $10 \mu \mathrm{~A}$ |
| Option C: | $50 \mu \mathrm{~A}$ |
| Option D: | $110 \mu \mathrm{~A}$ |
| 8. | Minimum number of Transistor Practical Cascode current source circuits required are? |
| Option A: | 1 |
| Option B: | 3 |
| Option C: | 5 |
| Option D: | 7 |

| 9. | Resistive load CS Amplifier is not preferred because |
| :---: | :---: |
| Option A: | It consumes small silicon area |
| Option B: | It consumes large silicon area |
| Option C: | Output swing is smaller |
| Option D: | Power dissipation is very high |
|  |  |
| 10. | Cascode Amplifier is combination of |
| Option A: | CS-CS stage |
| Option B: | CS-CD stage |
| Option C: | CS-CG stage |
| Option D: | CD-CG stage |
|  |  |
| 11. | For the diode connected CS amplifier (W1/L1) $=(100 / 0.5)$, (W2/L2) $=10 / 0.5$, $\mathrm{ID} 1=\mathrm{ID} 2=0.5 \mathrm{ma}, \mathrm{Vtn}=0.7 \mathrm{~V}$. Calculate overall voltage gain. |
| Option A: | 2.1622 |
| Option B: | 10 |
| Option C: | 0.10 |
| Option D: | 3.1622 |
|  |  |
| 12. | The voltage gain of double cascode amplifier is |
| Option A: | $\mathrm{gm}_{\mathrm{m}} \mathrm{r}^{\text {d }}$ |
| Option B: | $\mathrm{g}_{\mathrm{m}} \mathrm{r}_{0}{ }^{2}$ |
| Option C: | $\mathrm{g}_{\mathrm{m}} \mathrm{r}^{2}{ }^{2} / 2$ |
| Option D: | $\mathrm{gm}^{2} \mathrm{r}_{0}{ }^{2} / 4$ |
|  |  |
| 13. | Differential Amplifier with active load is preferred over differential amplifier with resistive load because |
| Option A: | Active load differential amplifier consumes less silicon area |
| Option B: | Active load differential amplifier consumes more silicon area |
| Option C: | Active load differential amplifier consumes more power |
| Option D: | Active load differential amplifier is more noisy |
|  |  |
| 14. | For a MOSFET if $\mathrm{g}_{\mathrm{m}}=1$ mili mho and $\mathrm{r}_{0}=10 \mathrm{~K} \Omega$, then its intrinsic voltage gain is |
| Option A: | 1 |
| Option B: | 10 |
| Option C: | 100 |
| Option D: | 1000 |
|  |  |
| 15. | Find the expression of the differential voltage gain for the given circuit. $\text { Assume }_{m}=g_{m 1}=g_{m 2^{\prime}} g_{m 3}=g_{m 4^{\prime}} r_{03}=r_{04^{\prime}} r_{01}=r_{02}$ |

|  |  |
| :---: | :---: |
| Option A: | $A_{d}=\frac{v_{o d}}{v_{i d}}=g_{m}\left(r_{01} \\| r_{03}\right)$ |
| Option B: | $A_{d}=\frac{v_{o d}}{v_{i d}}=g_{m 3}\left(r_{03} \\| r_{04}\right)$ |
| Option C: | $A_{d}=\frac{v_{o d}}{v_{i d}}=g_{m 4}\left(r_{o 1} \\| r_{o 4}\right)$ |
| Option D: | $A_{d}=\frac{v_{o d}}{v_{i d}}=g_{m}\left(r_{03} \\| r_{04}\right)$ |
|  |  |
| 16. | The number of input terminals The differential amplifier has |
| Option A: | 1 |
| Option B: | 2 |
| Option C: | 3 |
| Option D: | 4 |
|  |  |
| 17. | Maximum achievable power efficiency of Class C amplifier is |
| Option A: | 25\% |
| Option B: | 50\% |
| Option C: | 78\% |
| Option D: | More than 90\% |
| 18. | Which type of power amplifier is the given circuit? |
| Option A: | Class B |
| Option B: | Class E |
| Option C: | Class F |

| Option D: | Class C |
| :---: | :--- |
|  |  |
| 19. | To fabricate Inductor inside the IC we use |
| Option A: | Plastic spiral wire |
| Option B: | Polysilicon spiral wire. |
| Option C: | Silicon spiral wire |
| Option D: | Metal spiral wire |
|  |  |
| 20. | In class D Power amplifier the MOS transistors operates in |
| Option A: | Triode region |
| Option B: | Acts as switch |
| Option C: | Saturation Region |
| Option D: | Breakdown region. |

Q2

| Q3. | Solve any Two Questions out of Three 10 marks each |
| :---: | :--- |
| A | What is the drawback of Current Mirror circuit, how to overcome it? Draw <br> and explain the working of Cascode current source. |
| B | For CS amplifiers with PMOS diode connected load derive the equation for <br> voltage gain and output voltage swing. |
| C | Explain the various parasitic Capacitances associated with the MOSFET. |

## University of Mumbai

Examination June 2021
Examinations Commencing from 15 ${ }^{\text {th }}$ June 2021 to $26^{\text {th }}$ June 2021
Program: Electronics \& Telecommunication Engineering
Curriculum Scheme: Rev2016
Examination: TE
Semester: V
Course Code: ECCDLO5012 and Course Name: TV \& Video Engineering
Time: 2-hour

| Q1. | Choose the correct option for following questions. All the Questions are <br> compulsory and carry equal marks |
| :---: | :--- |
|  |  |
| 1. | How much is the vertical blanking period in television system? |
| Option A: | $1280 \mu \mathrm{~s}$ |
| Option B: | $1150 \mu \mathrm{~s}$ |
| Option C: | $1580 \mu \mathrm{~s}$ |
| Option D: | $1296 \mu \mathrm{~s}$ |
|  |  |
| 2. | The frequency difference between sound carrier and picture carrier is |
| Option A: | 1.5 MHz |
| Option B: | 2.5 MHz |
| Option C: | 4.5 MHz |
| Option D: | 5.5 MHz |
|  |  |
| 3. | Which video compression standard is also known as High Efficiency Video <br> Coding or MPEG-H Part-2? |
| Option A: | H.262 |
| Option B: | H.264 |
| Option C: | H.265 |
| Option D: | H.261 |
|  |  |
| 4. | Compatibility implies that: |
| Option A: | The color television signal must produce a normal black and white picture on a <br> monochrome receiver without any modification of the receiver circuitry. |
| Option B: | The monochrome signal must produce a normal black and white picture on a <br> color receiver without any modification of the receiver circuitry. |
| Option C: | The monochrome signal must produce a color picture on a color receiver without <br> any modification of the receiver circuitry. |
| Option D: | The color television signal must produce a color picture on a color receiver <br> without any modification of the receiver circuitry. |
| Option A: | RTP |
| Option B: | SMTP |
| Option C: | TCP/IP |
| Option D: | HTTP |
|  |  |
|  | Which of the communication protocol is applicable to IPTV? |

| 6. | The colour subcarrier frequency in the NTSC system has been chosen to have an exact value equal to <br> MHz . |
| :---: | :---: |
| Option A: | 3.574595 |
| Option B: | 3.597545 |
| Option C: | 3.579545 |
| Option D: | 3.559745 |
| 7. | According to digital component studio standard the scanning frequency for luminance and chrominance signals are 13.5 MHz and 6.75 MHz but for the compression purpose, what is the common sampling rate used to read? |
| Option A: | 20.75 MHz |
| Option B: | 25.75 MHz |
| Option C: | 20.25 MHz |
| Option D: | 30.25 MHz |
| 8. | Which of the following is not an advantage of LED TV? |
| Option A: | Less power |
| Option B: | Brighter display with better contrast |
| Option C: | Lesser heat dissipation |
| Option D: | Thicker panel |
| 9. | What will be the percentage interlace error if there is $16 \mu$ s delay in the start of the second field? |
| Option A: | 25\% |
| Option B: | 50\% |
| Option C: | 75\% |
| Option D: | 100\% |
| 10. | Which of the following is not a part of Image Orthicon camera tube? |
| Option A: | Image section |
| Option B: | Current mirror section |
| Option C: | Scanning section |
| Option D: | Multiplier section |
| 11. | Colour burst signal is sent during which of the following interval? |
| Option A: | Front Porch |
| Option B: | Vertical Blanking |
| Option C: | Back Porch |
| Option D: | Active line |
|  |  |
| 12. | Which of the following statement is not true about the chromaticity diagram? |
| Option A: | It is a horse shoe shaped triangular diagram. |
| Option B: | Saturated pure spectral colours are represented along the perimeter of the diagram. |
| Option C: | The three corners represent complementary colours. |
| Option D: | White colour is located at the centre point of the chromaticity diagram. |
|  |  |
| 13. | Which of the following is the invalid statement for NTSC system? |

| Option A: | The I-signal is along the reddish orange and bluish green axis. |
| :---: | :--- |
| Option B: | I signal passed through 1.5MHz filter. |
| Option C: | Q signal is passed through 0.5MHz filter. |
| Option D: | Y signal is passed through 7MHz filter. |
|  |  |
| 14. | Which of the following is not a Chroma sub-sampling scheme? |
| Option A: | $4: 4: 4$ |
| Option B: | $4: 2: 2$ |
| Option C: | $4: 1: 1$ |
| Option D: | $4: 2: 3$ |
|  |  |
| 15. | Which of the following is not a type of digital TV? |
| Option A: | SDTV |
| Option B: | EDTV |
| Option C: | CCTV |
| Option D: | HDTC |
|  |  |
| 16. | Select the incorrect one form of DVB standard from the following: |
| Option A: | DVB-H-Digital Video Broadcasting-Handheld |
| Option B: | DVB-S--Digital Video Broadcasting-Satellite |
| Option C: | DVB-C-Digital Video Broadcasting-Cable |
| Option D: | DVB-E-Digital Video Broadcasting-Enhance |
|  |  |
| 17. | Which of the following TV uses Quantum Dot technology? |
| Option A: | UHD |
| Option B: | LED |
| Option C: | SUHDTV |
| Option D: | HDTV |
|  |  |
| Option A: | Lines with video signal-24 to 310 and 336 to 622 |
| Optic of D2-MAC? |  |
| Option B: | interlace ratio is 2:1 |
| Option C: | Samples for luminance - 697 |
| Option D: | Samples for chrominance - 457 |
|  |  |
| Option A: | HDMI |
| Option B: | RCA |
| Option C: | Ethernet |
| Option B: | The elements of CCTV system are |
| Option C: | video camera, video switcher, TV monitor, coaxial cables |
| Option D: | video camera, programming source, broadcaster, fiber optic cable |
|  | video camera, modulator, sync separator, TV monitor |
| 20. | Which of the following is not available as connectivity option in Chromecast |

## Option 1

| Q2 <br> (20 Marks) | Solve any Four out of Six |
| :---: | :--- |
| A | Draw and explain channel bandwidth for PAL television system. |
| B | Justify the choice of a rectangular frame with width to height ratio $=4 / 3$ for <br> TV transmission \& reception. |
| C | With the help of a relevant diagram explain colour circle or colour wheel. |
| D | Draw D2-MAC packet format/signal and state characteristics of D2-MAC. |
| E | What is a Set-Top-Box? Draw its block diagram and explain its operation in <br> brief. |
| F | Write short note on Satellite Television. |

| Q3. <br> (20 Marks) | Solve any Four out of Six |
| :---: | :--- |
| A | Draw and explain electron multiplier section in image orthicon camera <br> tube. |
| B | Explain the terms:-- <br> ii. Additive mixing <br> ii. Luminance, Hue and Saturation |
| C | Mention the time period allotted for following elements of Composite <br> Video Signal: <br> i) <br> ii)$\quad$Vertical Sync Pulse <br> Active Line Period |
| iii) | Horizontal Retrace Period <br> iv) <br> v) |
| Front Porch |  |
| Back Porch |  |

Examinations Commencing from $15^{\text {th }}$ June 2021 to $\mathbf{2 6}^{\text {th }}$ June 2021
Program: Electronics \& Telecommunication Engineering
Curriculum Scheme: Rev2016
Examination: TE Semester V
Course Code: ECCDLO5012 and Course Name: TV \& video Engineering
Time: 2 hour
Max. Marks: 80

| Question <br> Number | Correct Option |
| :---: | :---: |
| Q1. | A |
| Q2. | D |
| Q3. | C |
| Q4 | A |
| Q5 | A |
| Q6 | C |
| Q7 | C |
| Q8. | D |
| Q9. | B |
| Q10. | B |
| Q11. | C |
| Q12. | C |
| Q13. | D |
| Q14. | D |
| Q15. | C |
| Q16. | D |
| Q17. | C |
| Q18. | D |
| Q19. | A |
| Q20. | B |
|  |  |
|  |  |

# University of Mumbai 

Examination June 2021
Examinations Commencing from $15^{\text {th }}$ June 2021 to $26^{\text {th }}$ June2021
Program: Electronics and Telecommunication Engineering
Curriculum Scheme: Rev 2016
Examination: TE, Semester: V
Course Code: ECCDLO 5013 and Course Name: Elective I: Finite Automata Theory

| Q1. | Choose the correct option for following questions. All the Questions are <br> compulsory and carry equal marks |
| :---: | :--- |
|  |  |
| 1. | A switching function $F$ can be decomposed into two threshold elements $F_{1}$ and $F_{2}$ <br> The function F can be implemented using |
| Option A: | 2 threshold elements interconnected to perform AND operation |
| Option B: | 2 threshold elements interconnected to perform NAND operation |
| Option C: | 2 threshold elements interconnected to perform OR operation |
| Option D: | 2 threshold elements interconnected to perform NOR operation |
|  |  |
| 2. | How many flip-flops will be complemented in a 10-bit binary ripple counter to <br> reach the next count after the count 1001100111 |
| Option A: | 4 |
| Option B: | 5 |
| Option C: | 6 |
| Option D: | 9 |
|  |  |
| 3. | The race in which stable state depends on order is called |
| Option A: | Critical race |
| Option B: | Identical race |
| Option C: | Non critical race |
| Option D: | Defined race |
|  |  |
| 4. | The table having one state in each row is called |
| Option A: | Transition table |
| Option B: | State table |
| Option C: | Flow table |
| Option D: | Primitive flow table |
|  |  |
| Option A: | Conditional box has a shape of |
| Option B: | Rectangle |
| Option C: | Oval |
| Option D: | Pentagon |
|  |  |
|  |  |

| 6. | How many number of prime implicants are there in the expression $\mathrm{F}(\mathrm{x}, \mathrm{y}, \mathrm{z})=$ $y^{\prime} z^{\prime}+x y+x$ 'z. |
| :---: | :---: |
| Option A: | 7 |
| Option B: | 19 |
| Option C: | 3 |
| Option D: | 53 |
|  |  |
| 7. | In digital circuits permanent faults may arises due to |
| Option A: | Noise |
| Option B: | Non ideal transient behaviour of components |
| Option C: | Failure of component |
| Option D: | Propagation time |
|  |  |
| 8. | A threshold function |
| Option A: | May be a unate function |
| Option B: | is not a unate function |
| Option C: | Is always a unate function |
| Option D: | may or may not be unate function |
|  |  |
| 9. | An AB flip-flop is constructed from an SR flip-flop. The expression for next $Q(n+1)$ state is |
| Option A: | $\bar{A} \bar{B}+A Q$ |
| Option B: | $\bar{A} \bar{B}+\bar{B} Q$ |
| Option C: | Both A and B |
| Option D: | A+B |
|  |  |
| 10. | Race condition is present in |
| Option A: | synchronous logic circuit |
| Option B: | asynchronous logic circuit |
| Option C: | ideal logic circuit |
| Option D: | Combinational logic circuit |
|  |  |
| 11. | An implicant that is not a proper subset of any other implicant i.e. it is not completely covered by any single implicant, is called |
| Option A: | Intersection set |
| Option B: | Essential prime implicant |
| Option C: | Prime implicant |
| Option D: | Union set |
|  |  |
| 12. | The shaded area of the figure is best described by? |

|  |  |
| :---: | :---: |
| Option A: | $\mathrm{A}^{\text {¢ }}$ (Complement of A$)$ |
| Option B: | A U B - B |
| Option C: | $A \cap B$ |
| Option D: | B'(complement of B) |
| 13. | The T-gate shown below represents $\mathrm{F}=$ |
| Option A: | $\overline{\mathrm{A}} \mathrm{B}$ |
| Option B: | AB |
| Option C: | AB |
| Option D: | AB |
| 14. | The binary relation $\{(1,1),(2,1),(2,2),(2,3),(2,4),(3,1),(3,2)\}$ on the set $\{1,2$, is |
| Option A: | reflective, symmetric and transitive |
| Option B: | irreflexive, symmetric and transitive |
| Option C: | neither reflective, nor irreflexive but transitive |
| Option D: | irreflexive and antisymmetric |
| 15. | Suppose a relation $\mathrm{R}=\{(3,3),(5,5),(5,3),(5,5),(6,6)\}$ on $\mathrm{S}=\{3,5,6\}$. Here R is known as |
| Option A: | equivalence relation |
| Option B: | reflexive relation |
| Option C: | symmetric relation |
| Option D: | transitive relation |
| 16. | In system engineering which of the following methods bridges the gap between the two ends of system development? |
| Option A: | ASM method |
| Option B: | VSM method |
| Option C: | Factor method |
| Option D: | FSM method |
| 17. | According to Moore circuit, the output of synchronous sequential circuit depend/s on $\qquad$ of flip flop |
| Option A: | Past state |
| Option B: | Present state |
| Option C: | Nest state |
| Option D: | External inputs |

|  |  |
| :---: | :--- |
| 18. | How many binary relations are there on a set S with 9 distinct elements? |
| Option A: | $2^{90}$ |
| Option B: | $2^{100}$ |
| Option C: | $2^{81}$ |
| Option D: | $2^{60}$ |
|  |  |
| 19. | Simplify the expression using K-maps: $\mathrm{F}(\mathrm{A}, \mathrm{B}, \mathrm{C})=\pi(0,2,4,5,7)$. |
| Option A: | $(\mathrm{x}+\mathrm{y})(\mathrm{y}+\mathrm{z})(\mathrm{x}+\mathrm{z})\left(\mathrm{x} ’+\mathrm{z}^{\prime}\right)$ |
| Option B: | $\left(\mathrm{x}+\mathrm{z}^{\prime}\right)(\mathrm{y}+\mathrm{z})(\mathrm{x}+\mathrm{y})$ |
| Option C: | $\left(\mathrm{x}+\mathrm{y}^{\prime}+\mathrm{z}\right)\left(\mathrm{x}+\mathrm{z}^{\prime}\right)$ |
| Option D: | $\left(\mathrm{y}^{\prime}+\mathrm{z}^{\prime}\right)\left(\mathrm{x} \mathrm{x}^{\prime}+\mathrm{y}\right)\left(\mathrm{z}+\mathrm{y}^{\prime}\right)$ |
|  |  |
| 20. | In dynamic hazards multiple output transition can occur if |
| Option A: | Circuit have single path with different delay |
| Option B: | Circuit have multiple path with different delay |
| Option C: | Circuit have multiple path with single delay |
| Option D: | Circuit have single path with single delay |

| Q2. | Solve any Two Questions out of Three 10 marks each |
| :---: | :---: |
| A | Design a 3 bit counter which counts in the following sequence using T flip flop. 0-1-3-4-5-7-0-.....etc. |
| B | Find the fault table for all stuck-at faults of the following circuit. And prepare test generation using exclusive or method |
| C | The set $\{\mathrm{a}, \mathrm{b}, \mathrm{c}, \mathrm{d}, \mathrm{e}, \mathrm{f}, \mathrm{g}, \mathrm{h}, \mathrm{i}, \mathrm{j}, \mathrm{k}\}$ has the partitions $\begin{aligned} \pi_{1} & =\{\overline{a, b, c} ; \overline{d, e} ; \bar{f} ; \overline{g, h, i} ; \overline{j, k}\} \\ \pi_{2} & =\{\overline{a, b} ; \overline{c, g, h} ; \overline{d, e, f} ; \overline{i, j, k}\} \\ \pi_{3} & =\{\overline{a, b, c, f} ; \overline{d, e, g, h, i, j, k}\} \end{aligned}$ <br> i) Find $\pi_{1}+\pi_{2}$ and $\pi_{1} \cdot \pi_{2}$ <br> ii) Find $\pi_{1}+\pi_{3}$ and $\pi_{1} \cdot \pi_{3}$ <br> iii) Find a partition that is greater than $\pi_{1}$ and smaller than $\pi_{3}$. |

| Q3. | Solve any Two Questions out of Three 10 marks each |
| :---: | :--- |
| A | Explain distinguishing and synchronizing sequence techniques. |
| B | Find the homing sequence and synchronizing sequence for the following <br> machine. |
|  | Present State |

|  |  | $\mathbf{X}=\mathbf{0}$ | $\mathbf{X}=\mathbf{1}$ |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | A | $\mathrm{B}, 0$ | $\mathrm{D}, 0$ |
|  | B | $\mathrm{~A}, 0$ | $\mathrm{~B}, 0$ |  |
|  | C | $\mathrm{D}, 1$ | $\mathrm{~A}, 0$ |  |
|  | D | $\mathrm{D}, 1$ | $\mathrm{C}, 0$ |  |
| C | Realize the Boolean function using Threshold gate <br> $f(w, x, y, z)=\sum m(0,1,4,5,8,9,11,13)$ |  |  |  |

Examination June 2021
Examinations Commencing from $15^{\text {th }}$ June 2021 to $26{ }^{\text {th }}$ June 2021
Program: Electronics and Telecommunication Engineering
Curriculum Scheme: Rev2016
Examination: Third Year Semester : V
Course Code: ECCDLO5014 and Course Name: Data Compression and Encryption

| Q1. | Choose the correct option for following questions. All the Questions are <br> compulsory and carry equal marks |
| :---: | :--- |
| 1. | What is the characteristic of Network based IDS? |
| Option A: | They look for attack signatures in network traffic |
| Option B: | Filter decides which traffic will not be discarded or passed |
| Option C: | It is programmed to interpret a certain series of packet |
| Option D: | It models the normal usage of network as a noise characterization |
|  |  |
| 2. | The full form of SSL is |
| Option A: | Serial Session Layer |
| Option B: | Secure Socket Layer |
| Option C: | Session Secure Layer |
| Option D: | Series Socket Layer |
|  |  |
| 3. | Which protocol consists of only 1 bit in SSL? |
| Option A: | Alert |
| Option B: | Handshake |
| Option C: | Alarm |
| Option D: | Cipher change spec |
|  |  |
| 4. | Computation of the discrete logarithm is the basis of the cryptographic system in |
| Option A: | Symmetric cryptography |
| Option B: | Asymmetric cryptography |
| Option C: | Diffie-Hellman key exchange |
| Option D: | Secret key cryptography |
|  |  |
| 5. | In RSA, $\Phi$ (n) = |
| Option A: | (p)/(q) |
| Option B: | (p)(q) |
| Option C: | (p-1)(q-1) |
| Option D: | (p+1)(q+1) |
| 6. | When a hash function is used to provide message authentication, the hash <br> function value is referred to as <br> Option A: |
| Option B: | Message Field |

## University of Mumbai

Examination June 2021
Examinations Commencing from $15^{\text {th }}$ June 2021 to $26{ }^{\text {th }}$ June 2021

| Option C: | Message Score |
| :---: | :--- |
| Option D: | Message Leap |
|  |  |
| 7. | SHA-1 produces a hash value of |
| Option A: | 256 |
| Option B: | 160 |
| Option C: | 180 |
| Option D: | 224 |
|  |  |
| 8. | Which of the following is a type of traditional cipher? |
| Option A: | transportation cipher |
| Option B: | transposition cipher |
| Option C: | transforming cipher |
| Option D: | vigenere cipher |
|  |  |
| 9. | The DES Algorithm Cipher System consists of <br> each with a round key |
| Option A: | 12 |
| Option B: | 18 |
| Option C: | 14 |
| Option D: | 16 |
|  |  |
| 10. | Moving picture expert group 2 is used to compress |
| Option A: | video |
| Option B: | audio |
| Option C: | Image |
| Option D: | frames |
|  |  |
| 11. | Moving picture expert group 1 is designed for a |
| Option A: | PC |
| Option B: | CD |
| Option C: | DVD |
| Option D: | Floppy |
|  |  |
| 12. | In audio and Video Compression , each frame is divided into small grids, called as |
| Option A: | Frame |
| Option B: | Packet |
| Option C: | Pixel |
| Option D: | Byte |
|  |  |
| Option A: | Transposition Cipher |
| Option C: | Substitution Cipher |
| Option D: | Dook based Encoding |
|  | \begin{tabular}{l}
\end{tabular} |
| Which mary-based encoding |  |

Examinations Commencing from $15^{\text {th }}$ June 2021 to $26^{\text {th }}$ June 2021

| 14. | is used to compress images. |
| :---: | :---: |
| Option A: | MPEG |
| Option B: | JPEG |
| Option C: | AVI |
| Option D: | CPEG |
|  |  |
| 15. | Quantization noise can be reduced by ___ the number of levels. |
| Option A: | Increasing |
| Option B: | Decreasing |
| Option C: | Doubling |
| Option D: | Multiplying |
|  |  |
| 16. | Which of the following algorithms is the best approach for solving Huffman codes? |
| Option A: | exhaustive search |
| Option B: | greedy algorithm |
| Option C: | brute force algorithm |
| Option D: | divide and conquer algorithm |
|  |  |
| 17. | Which is the compression method where data is the same as it was before compression when decompressed? |
| Option A: | Lossy |
| Option B: | Lossless |
| Option C: | Keyless |
| Option D: | Compress |
|  |  |
| 18. | ______ is one of the best-known Dictionary-based encoding algorithms. |
| Option A: | Lempel-Ziv |
| Option B: | CRZ |
| Option C: | BMW |
| Option D: | CBW |
|  |  |
| 19. | What is compression? |
| Option A: | To compress something by pressing it very hardly |
| Option B: | To minimize the time taken for a file to be downloaded |
| Option C: | To reduce the size of data to save space |
| Option D: | To convert one file to another. |
|  |  |
| 20. | In Huffman coding, data in a tree always occur in |
| Option A: | Roots |
| Option B: | Leaves |
| Option C: | Fruit |
| Option D: | Flower |

Examinations Commencing from $15^{\text {th }}$ June 2021 to $\mathbf{2 6}^{\text {th }}$ June 2021

| Q2. (20 Marks) |  |
| :---: | :--- |
| A | Solve any Two |
| i. | Explain Fermat's theorem. |
| ii. | Explain Digital Signature. |
| iii. | Encode the sequence "BABAABAAA" using LZW. |
| B | Solve any One |
| i. | Explain RSA algorithm. |
| ii. | Explain DPCM used in audio compression in detail. |

| Q3. (20 Marks) |  |
| :---: | :--- |
| A | Solve any Two |
| i. | Write a short note on Cryptographic Attacks. |
| ii. | Explain the features of MPEG-1 |
| iii. | Write a short note on H.261. |
| B | Solve any One |
| i. | Explain the working of DES algorithm with Block diagram. |
| ii. | State the difference between JPEG and JPEG 2000. State the applications, <br> advantages and limitations of JPEG 2000. |
