

Semester: Jan – Mar 24								
Maximum Marks: 50 Examination: ETE Exam Date: 28-03-2024 Duration: 3 Hours								
Programme code: 01 Programme: MBA				Class: SY	Semester/Trimester: VI			
College: K. J. Somaiya Institute of Management			Name of the department/Section/Center: Business Analytics					
Course Code: 217P01M622			Name of the Course: Machine	Learning approach for Multivariate Data Analysis				

Instructions:

- 1. You must attempt 5 questions in all. All questions carry equal marks.
- 2. Question 1 is compulsory.
- 3. All subparts to a question must be answered.
- 4. Calculator is allowed.

A researcher examined the purchasing behaviour in an online shop. The aim is to determine the influencing factors that lead a person to buy any product from the online shop after visiting the website. The online shop provides the data collected for this purpose. The researcher used logistic regression analysis to find the influencing factors. The variables used for the analysis are mentioned below. Dependent variables: Purchasing behaviour (Nominal scale) O-Not purchasing any product Independent variables: Gender (Nominal scale) Age (Ratio scale) Marital status (Nominal scale) Income (Ratio scale) Time spent in the enline shop (Ratio scale) Preferred mode of payment (Nominal scale) The output is given below: Variables in the Equation B S.E. Wald df Sig. Exp(B) Gender © Male Female 2-2.869 1.113 6.651 1 0.010 Age127 0.047 7.313 1 0.007	tion No.		1

Age group (Nominal scale)

1. 18-30

2

3

2. 31-45

Shoe brands (Nominal scale)

- 1. Nike
- 2. Adidas
- 3. Hoka

Race finishing time (Ratio scale)

The output table is given below:

Tests of Between-Subjects Effects

Dependent Variable: race_finish_time

Source	Type III Sum of Squares	df	Mean Square	F	Sig.
Corrected Model	2566.200 ^a	5	513.240	1.445	.223
Intercept	83477.400	1	83477.400	234.971	.000
age_group	317.400	1	317.400	.893	.349
shoe brands	1016.400	2	508.200	1.430	.248
age group * shoe brands	1232.400	2	616.200	1.734	.186
Error	19184.400	54	355.267		
Total	105228.000	60			
Corrected Total	21750.600	59			

- a) How the degrees of freedom for error is 54?
- b) How the degrees of freedom for total is 60?
- C) Construct the null and alternative hypothesis.
- d) Conclude the result at 5% level of significance.

The researcher wants to determine the impact of Social skills, Intellectual skills and motivation on Job Performance. All the variables are composites of multiple items. The explanation is given below:

Client satisfaction (ClientSat): A satisfaction rating between 1 and 100 by your main client

10

Superior satisfaction(SuperSat): A rating on Job Performance between 1 and 100 by your superior

Project completion (ProjCompl): The percentage of your projects that was successfully delivered

Psychiatric Test 1 (PsychTest1): a score between 1–100

Psychiatric Test 2 (PsychTest2):also a score between 1-100

Tears of education (YrsEdu): Number of years of higher education followed

IQ: Score on an IQ test

Hours training (HrsTrain): Number of hours spent on training

Hours working (HrsWrk): Average number of hours in a workweek

Job performance = ClientSat + SuperSat + ProjCompl

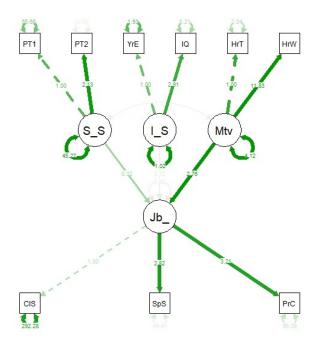

Social Skills = PsychTest1 + PsychTest2

 $\textbf{Intellectual Skills} = Y_{TS}Edu + IQ$

Motivation = HrsTrn + HrsWrk

The researcher ran a structural equation modelling to fulfil the objective. The output is given below:

Regressions:						
	Estimate	Std.Err	z-value	P(> z)	Std.lv	Std.all
Job_performance ~						
Social_Skills	0.325	0.029	11.085	0.000	0.389	0.389
Intllctl_Sklls	0.725	0.077	9.361	0.000	0.13	0.13
Motivation	2.758	0.234	11.769	0.000	0.998	0.998

Interpret the output.

A firm surveyed its employees to determine the relationship between sales performance and intelligence of the employees. Two collections of variables were measured:

Sales Performance:	Test Scores as a Measure of Intelligence:
Sales Growth	Mechanical Reasoning

	Sales Profitability		Mathema	Reasoning				
The research	er then conducted c	anonical correlati	on analysis.	The output is mer	ntioned below:			
				Canonical Corre	lations			
	Correlation	Eigenva	lue	Wilks Statistic	F	Num D.F	Denom D.F.	
1		.985	32.010		.015 106.514	6.000	90.00	00

An airline company planned to design a product considering four attributes namely Price, Duration, Comfort and Entertainment. Mentioned

10

below the attributes and their levels.

l l l l l l l l l l l l l l l l l l l	
Price	Duration
5000	2 hours
8000	5 hours
10000	
Comfort	Entertainment
Cramped seat	TV screen
Spacious seat	Magazine
	Music system

Using the four attributes and their levels, the company generated some combinations using SPSS orthogonal design. The combinations were considered as questionnaire and circulated among the customers. After getting the response, the company ran a conjoint analysis to finalize the product. The questionnaire and the output tables are given below.

Utilities

Cuntes					
		Utility			
		Estimate			
Price	5000	.117			
	8000	.533			
	10000	450			
Duration	2 hours	.450			
	5 hours	-1.183
